Dear Dropbox Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. I love being able to access my files wherever there is internet connection. For that I love the idea of drop box: letting people save, access, and share files everywhere regardless of physical location. Nowadays, that's real mobility for people like me.

I understand that you are looking for developers who have experience working in fast pace agile environments across different teams to implement beautiful and informative UI. As someone who thrives in high energy environments, I have been working in agile teams building applications by delivering UI with high usability. Recently, I have developed applications with elegant front-ends with interactive features in technologies such as Angular.js and Backbone.js for high responsiveness. Besides these technologies, I am also experienced in other commonly used ones like: HTML5, CSS3, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more details about the challenges and features you are focusing on right now, and show you how I can contribute to the development of your highly accessible file sharing platform.

Thank you very much for your time.

Huiqiang Huang
