Dear Yelp Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. Being a productive developer, I love tools that helps me to make informed decisions quickly, and that's why I love the services Yelp has been providing: reliable reviews for business tailored to users' specifications. Now that's efficiency that I believe in.

I understand that you are looking for developers to develop features across the stack. As a versatile programmer, I have been building full stack applications delivering UI with high usability, implementing stable back-ends for high dependability. Recently, I have developed elegant front-ends with well known MVC frameworks such as Angular.js and Backbone.js for high responsiveness. Secondly, I have built modern back-ends to manage authentication and heavy data load in various back-end technologies such as: Node.js, Express.js, and PostgreSQL. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Ruby, MongoDB, Heroku, Mongoose.js, Sequelize, HTML5, CSS3, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more details about the full stack challenges and features you are focusing on right now, and show you how I can contribute to the development of a great platform that makes dining out on Saturday night much easier.

Thank you very much for your time

Huiqiang Huang
