Dear Amazon.Com Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. As someone who loves efficiency, I have been using Amazon a lot, and I love how the service has been making my life so much easier. That's the kind of efficiency that I believe in.

I understand that you are looking for developers who have experience working in fast pace agile environments to work across the stack creating informative UI and building a solid back end. As someone who thrives in high energy environments, I have been working in agile teams building full stack applications. I can build applications delivering UI with high usability and implementing stable back-ends for high dependability. Recently, I have developed elegant front-ends with well known MVC frameworks such as Angular.js and Backbone.js for high responsiveness. Secondly, I have built modern back-ends to manage authentication and heavy data load in various back-end technologies such as: Node.js, Express.js, and PostgreSQL. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Ruby, MongoDB, Heroku, Mongoose.js, Sequelize, HTML5, CSS3, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more details about the challenges and features you are focusing on right now, and show you how I can contribute to the development of the greatest online shopping service.

Thank you very much for your time.
