Dear Lyft Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. I like highly personalized transportation that takes me anywhere anytime, and I love how Lyft has been able to do this by providing a peer-to-peer platform which enables high degree of mobility. Now that is freedom that I believe in.

I understand that you are looking for developers with experience working in fast pace agile environments to create highly interactive front-end for better UX. As someone who thrives in high energy environments, I have been working in agile teams building UI with high usability. Recently, I have developed elegant ease-to-use front-end with technologies such as HTML5, CSS3, and Angular.js for high responsiveness. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Backbone.js, jQuery, and Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more detail about the front-end feature you are focusing on right now, and show you how I can contribute to the development of your car sharing platform.

Thank you very much for your time

Huiqiang Huang
