Dear NodePrime Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. And I love how we can get a lot of great ideas and make better informed decisions by organizing the massive amount of data we have today. That's why I really like what NodePrime is providing: infrastructure to help people manage the huge amount of data to make better decisions.

I understand that you are looking for developers with experience working in a fast pace agile environment to work across the stack to implement a heavy duty back-end managing data and to create an informative front-end to visualize insight from the data. As someone who thrive in high energy environments, I have been working in agile teams building full stack applications. I have built stable back-ends for high dependability, and I can deliver UI interface with high usability. Recently, I have built back-ends with features to deal with heavy data load with modern practices such OAuth and Restful API and technologies such as: Node.js, Express.js, and PostgreSQL. I have developed elegant ease-to-use front-end with technologies such as HTML5, CSS3, and Angular.js for high responsiveness. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Ruby, Mongo.js, Heroku, Mongoose.js, Sequelize, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more details about the full stack challenges and features you are focusing on right now, and show you how I can contribute to the development of your data infrastructure.

Thank you very much for your time

Huiqiang Huang
