Dear Crittercism Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. I love tools that pull all things together and manage them in one place, and I love utilizing technologies to gain better insight for making more informed decisions. That's why I love what Crittercism has been doing: providing one streamlined platform helping developers to get better ideas on how their applications are doing. That's efficiency that I love.

I understand that you are looking for developers who has experience working in fast pace agile environment to work across the stack implanting interactive and informative UI and building a solid back end. As someone who thrives in high energy environment, I have been working in agile teams building full stack applications. I can build full stack applications delivering UI with high usability and implementing stable back-ends for high dependability. Recently, I have developed elegant front end with technologies such as Angular.js and Backbone.js for high responsiveness. Secondly, I have built back-end with modern practices such OAuth and Restful API and technologies such as: Passport.js, Express.js, and PostgreSQL. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Node.js, Ruby, MongoDB, Heroku, Mongoose.js, Sequelize, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more detail about full stack features you are focusing on right now, and show you how I can contribute to the development of your application performance analysis platform.

Thank you very much for your time

Huiqiang Huang
