Dear Salesforce.Com Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. As a productive developer, I love elegant solutions that pull things together and help users to make informed decisions. For that I love salesforce's streamline platform providing reliable data for business to make more effective decisions.

I understand that you are looking for developers who has experience working in fast pace agile environments to work across the stack implanting informative UI and building a solid back end. As someone who thrives in high energy environment, I have been working in agile teams building full stack applications. I can build full stack applications delivering UI with high usability and implementing stable back-ends for high dependability. Recently, I have developed full stack applications with elegant front-ends with socially interactive features in technologies such as Angular.js and Twitter API. Secondly, I have built modern back-ends to manage authentication and heavy data load in various back-end technologies such as: Node.js, Express.js, and PostgreSQL. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Ruby, MongoDB, Heroku, Backbone.js, Mongoose.js, Sequelize, jQuery, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more details about the challenges and features you are focusing on right now, and show you how I can contribute to the development of your highly versatile CRM.

Thank you very much for your time.

Huiqiang Huang
