Dear MyVr Recruitment Team:

I am a developer who loves creative problem solving and generating tangible results. And I love convenient tools that manage all the fragmented work with one simple solution, much like what myvr.com does: all the rental marketing tasks done in one platform. As productive developer, that is efficiency that I love.

I understand that your fast growing company is looking for an agile developer to work across the stack creating an interactive front-end for better UX and building a solid back-end. I thrive in high energy environment , I have been designing and building features quickly in teams that utilizing the agile workflow. I can build full stack applications delivering UI interface with high usability and implement stable back-end for high dependability. Recently, I have developed elegant ease-to-use front-end with technologies such as HTML5, CSS3, and Angular.js for high responsiveness. And I have built modern back-end to manage authentication and heavy data load in various back-end technologies such as: Node.js, Express.js, and PostgreSQL. Besides the aforementioned technologies, I am also experienced in other commonly used ones like: Ruby, Mongo.js, Heroku, Mongoose.js, Sequelize, jQuery, Backbone.js, Angular Material. As a curious developer, I am always interested in learning and using new technologies.

I look forward to hear more detail about the full-stack features that you are focusing on right now and show you how I can contribute to the development of your company to tackle the vacation rental industry.

Thank you very much for your time

Huiqiang Huang
